Bayer's Transparency Initiative has been a journey of commitment to openness, innovation, and advancing the conversation around science and its impact on society. Here are some of the highlights from the past five years:

- **2017**: In December 2017, a project was launched in the European Union (EU) with the aim of providing information on all Bayer-owned glyphosate safety study reports, which are now accessible to the public.
- **2018**: It was in January 2018 that Bayer's transparency platform went live officially. The initiative was a response to the growing demand for transparency in the agricultural industry.
- **2019**: In 2019, the focus was on ensuring further access to all Bayer-owned glyphosate safety study reports. This effort was part of the company's commitment to open science.
- **2020**: In early 2020, we facilitated access to all Bayer-owned glyphosate types of studies that could be accessed by the public. This move was a significant step towards making science more accessible.
- **2021**: 2021 was the year to focus on enabling access to science. It's about proactively sharing information on our transparency website, allowing you to connect with our scientists and develop new products. With the transparency platform, Bayer is committed to advancing its transparency efforts and developing new products that benefit farmers and the planet.

Bayer's Transparency Initiative has been a journey of commitment to openness, innovation, and advancing the conversation around science and its impact on society.
