Powerful Insect Protection, More Weed Control Options

THE CHALLENGE

Major chewing pests, evolving insect resistance and resistant weeds threaten Brazilian soybean production

THE SOLUTION

Layer advanced insect protection and 5-way herbicide tolerance onto a high-performing genetic base

THE BAYER DIFFERENCE

Built-in protection against the nine most challenging caterpillar pests, from emergence through harvest

First soybean trait to control the lesser cornstalk borer, helping protect seedlings at their most vulnerable stage*

Industry-leading tolerance to five herbicides providing Brazilian farmers more tools and flexibility to manage resistant weeds

YIELDBOOST delivers 4.3 bu/ac more yield than competing genetics at comparable maturity

*Expected to launch in the 2027/2028 crop season
